MPG Ranch Vegetation Data Classification and Analysis Overview Dan Mummey

We used the TWINSPAN (Two-Way Indicator SPecies ANalysis) algorithm (Roleček et al., 2009) to classify vegetation. The numbers below refer to the vegetation class, colors indicate the classes dominated by the same species. Pages 3-8 show maps of dominant species class.

(596-602).

Cheatgrass is the dominant or co-dominant species in the plots below. Secondary species vary between sub-classes. Most sites are low-elevation and/or south-facing.

Introduced forage grasses, including crested wheatgrass, intermediate wheatgrass, and

Spotted knapweed cover

Cheatgrass

Kentucky bluegrass

Classification table listing the four dominant vegetation species within each subclassification

Class	Dominant species				
1	Pinegrass	Ninebark	No Vegetation	Wood pussytoes

Roleček, J., Tichy, L., Zeleny, D., Chytry, M. (2009) Modified TWINSPAN classification in which hierarchy respects cluster heterogeniety. Journal of Vegetation Science 20, 596-602.

We evaluated the classification by examining the amount of vegetation and avian variance it explains.
