

A photograph of a hillside covered with clumps of crested wheatgrass. The grass is a mix of green and yellowish-brown, indicating some dryness. The soil is dark and appears to be a loam or clay. The grass is growing in distinct clumps, with bare soil visible between them. The overall scene is a natural, uncultivated landscape.

Crested wheatgrass control and wildlife crop activities.  
Spring 2012.  
Dan Mummey

Crested wheatgrass control.  
Areas were treated with 1.5 quart Roundup/acre (186 acres)

Weed control in sainfoin.  
Areas were treated with 6 oz Roundup/acre.

Areas tilled in preparation for corn, soybeans, sunflowers, and pumpkins.
