

This week I saw three bull snakes on the gravel roads. The sun's warmth rejuvenates them.

6,500 trees are planted, exclosed, and chipped! Dead trees were replaced and new clusters were added. Unless we receive a large rain event, we will start watering them next week.

Here is the new 2500 gallon "big rig" that we will use to water most of the trees. This week we got a few lessons on how to drive it. The duel 100 foot hoses will increase efficiency.

The students from Chief Dull Knife College helped us construct a buck and rail fence at the top of tongue creek. Next week, we will continue to erect fences around the chokecherry and rose bushes in this area. Our goal is to extend the shrubby vegetation to the top of the draw.

Logging equipment did some damage to the road in the middle of sheep camp stand. This week we spread a grass/forb seed mix on the disturbed areas and covered it with duff and woody debris. We hope that new recruitment will make this road vanish.
